                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 56 conligs. The true order of the pieces is not known and their order in this sequence record is
Submitted (18-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Jul 14, 2002 this sequence version replaced gi:20162777.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

sequenced from each end using the amplification primers. The sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next 10 bases averaged a quality score of 20 or greater.

sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next 10 bases averaged a quality score of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Direct Submission

* NOTE: This is a 'working draft' sequence. It currently
* consists of 30 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AF354168 215046 bp DNA linear HTG 16-MAY-2001

                                      NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 70 contigs. The true order of the pieces is not known and thehal order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            op in length

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 79 contigs. The true order of the pieces is not known and thehri order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                        g of 1463 bp in length

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being print and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human cDNA c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAH43681-84 represents genomic fragments encoding the human AMP-activated protein kinase gamma 3 subunit (PRKAG3). Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a ffor a C at nucleotide 550; and in exon 10 variation may be a substitution of a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution of a T for a C at nucleotide variation may be a mino acid substitution with the amino acid substitution Way Nation of the protein of a protein way also be nucleotide variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to a Nogo receptor homologue polypeptide, NgR2 or NgR3, comprising a 50 amino acid LRRCT sequence, a 384 amino acid NTLRRCT sequence, or a 420, 461 or 392 amino acid sequence, all given in the sequence, or a 420, 461 or 392 amino acid sequence, all given in the specification. The NgR3 protein or its binding antibody is useful for decreasing inhibition of axonal growth of a central nervous system (CNS) neuron, by contacting the neuron NgR3 or its antibody, and for treating CNS disease, disorder or injury, NgR3 or a vector comprising NgR3 is useful for treating cerebral injury, spinal cord injury, stroke, demyelinating diseases, e.g. multiple sclerosis, monophasic cemyelinating diseases, e.g. multiple sclerosis, monophasic cemyelination, encephalomyelitis, multiple sclerosis, monophasic cemyelitis, Marchiafava-Bignami disease, Spongy degeneration, Alexander's disease. Organizate Strabbe's disease. NgR3 is useful for inducing an immune response in a mammal against NgR3, as a bait protein in a two-hybrid or three-hybrid cor three-hybrid sussay, and sa a research tool for identification, characterisation and purification of interacting, requiatory proteins. The nucleotide sequences of the invention are useful for screening for RFLP associated
                                                                                                                                                                                                                                                                                                                                                          NgR2; NgR3; axonal growth; central nervous system; CNR5; cerebral injury; spinal cord injury; stroke; demyelianting diseases; multiple solenosis; monophasic demyeliantion; encephalomyelitis; Marchidava-Bignami disease; multifocal leukoencephalopathy; panencephalitis; Spongy degeneration; Alexander's disease; canavan's disease; metachromatic leukodystrophy; Krabbe's disease; immune, bait protein; genetic mapping; gene therapy; krabbe's disease; immune, bait protein; genetic mapping; gene therapy; transgenic animal; urregulated cellular growth; cancer; tumour; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                purifying
                                                                                                                                                                                                                                                                                                               Cerebroprotective; neuroprotective; cytostatic; Nogo receptor homologue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nogo receptor homolog polypeptide, NgR2 or NgR3, useful for
ing central nervous system disorder, cerebral injury, spinal cord
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NgR3, for localisation and/or quantitation of NgR3, and for diagnostic and therapeutic purposes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22-AUG-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14-AUG-2000;
    AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
trearment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expension by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally. (I)
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to provent,
cancers and cancer metastases of haematopoietic antigen genomic
concers and cancer metastases of haematopoietic antigen genomic
sequences from the present invention. AAK64942 to AAK64960 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Genomic sequence #608 encoding novel human connective tissue polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Gaps

```
tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (DDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides.

Wote: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of ignouncleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 1'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence where the compination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, certain and/or diagnosis of the abnormality of the proteins encoded by the full-length convar. The primers allow obtaining of the full-length convariant any specialised methods. AMH3632 to AMH3632 to AMH3632 represent human amino cid sequences; and AMH3632 to AMH3632 represent human amino call sequences; and AMH3632 to AMH3632 represent human amino call sequences; and the exemplification of the protein convergence.
                                                                                                                                                                Human; primer; detection; diagnosis; antisense therapy; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNas defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (I) poplynuclectides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynuclectides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metatases of hematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK874912 to AAK874950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5618 GIGGGGGTGGGGCTGGTGTGAGAACCCTGGGGGTGGGGGTGGGGGTG 5673

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      include: Ortostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antisthmatic; antirheumatic; antianthritic; antidiabetic; antisthmatic; antirheumatic; antianthritic; antidiabetic; antisthmatic; antirheumatic; antianthritic; antinflammatory; antithroid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; hrombolytic; coaqulant; cootropic; vasotropic; antipsoriatic and antianglogenic. The nootropic; vasotropic; antipsoriatic and antianglogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. CC polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of inhibiting the proliferation, differentiation or mobilisation of cdisorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate for effection, modulate haemostatic or thrombolytic activity, modulate haemostatic or thrombolytic activity, modulate and antagonists may be also be used in drug screens. AAC78449 to AAC78450 and AAB4440 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó

The present invention relates to a method for identifying a modulator of gamma aninobutyric acid_B (GABA_B) receptor_mediated activity, by monitoring the interaction between a CREBATF transcription factor capable of binding to GABA_B receptor. The present sequence is the coding sequence for human ATFX, which was used in the method of the present invention. ATFX is a member of the CREBATF family of transcription factors. ATFX contains a bZIP domain, by which it interacts with the coiled coil domain of GABA_B receptor. Modulators of GABA_B receptor activity are useful for traeting central nervous system or peripheral nervous system disorders. The present sequence encodes an ATFX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.

                                                                                     02-AUG-2001
The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dr primer and an oligonucleotide complementary

to the complementary strand of a polymucleotide which comprises one of

the 5602 nucleotide sequences defined in the specification, where the

coligonucleotide comprises at least 15 nucleotides, or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polymucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to the

complementary strand of a polymucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

polymucleotide which comprises a 13'-end sequence, where the

oligonucleotide which comprises at 15 nucleotides and the combination of

the 5'-end sequence/3'-end sequence is selected from those defined in

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primer sets can be used in antisense therapy and

particularly full-length cDMAs. The primers are also useful for the defined and a particularly full-length cDMAs. The primers are also useful for the defined and a particularly full-length cDMAs. The primers are also useful for the defined and a particularly full-length and a particularly full-length and a particularly for a particular of the specification and a particular of the specification are useful and a particular of the primer sets can be used in antisense therapy and

particularly full-length cDMAs. The primers are also useful for the defined and a particular of the primer sets can be useful and a particular of the primer sets can be useful and a particular of the primer and useful and a particular of the primer sets can be useful and a particular of the primer and useful and a particular of the primer and a particular of the primer are useful and a particular of the primer and a particular of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genomic sequence #165 encoding novel human connective tissue polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      detection and/or discusses of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH031628 and AAH13633 to AAH0342 represent human cold sequences; AAB92446 to AAH36893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polynucleotides, particularly the 5602 full-length CDNas defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
